

## **A-level Biology Bridging Work**

Write/type me approximately 300 words on why you want to study A-level Biology. Within this I want you to make reference to something related to biology that you have read/watched/listened to that you have found really interesting. If you're stuck for where to look try BBC Science [https://www.bbc.co.uk/news/science\\_and\\_environment](https://www.bbc.co.uk/news/science_and_environment) , Let's Learn Everything podcast <https://www.letslearneverything.com/> or Nature <https://www.nature.com/> .

Also, the first unit in biology is reliant on you having a good knowledge of chemistry (mainly chemical bonding). It would be a good idea to review your GCSE knowledge of covalent bonding and hydrocarbons.
