

Math Revision Strategies

Key Message: Effective Maths revision means practising lots of questions, writing the methods, working and answers in full. No shortcuts.

Therefore students need to have a range of electronic & printed resources so they can practise lots!

Key Message: Students need to show initiative to know what they need to revise/study, even if their friend is working on something completely different.

Resource 1

www.vle.mathswatch.co.uk

Username: 13xxx@denemagna

Password: volume

£10.00 per book (order through your teacher)

- Sizeable book covering all topics.
- Full colour images, explanations & practise questions

Math Revision Strategies

Key Message: Slow and steady is better than 'last minute'. There are lots of topics, so spread them out. Work for 45 mins max, then take at least 15 minute break.

Key Message: Students will need to be disciplined with their time. Manage the topic lists that their teachers have provided, and go through the topics one by one, and make sure you are fully equipped in lessons all the time.
